

# Anywhere Gallery

User & Installation Guide

# Introduction

Thank you for choosing a Magmodule extention for your Magento store. This document will provide you with all the information on installation and configuration of the extention. If you feel that you might have troubles with module installation, we advise that you order professional installation services before you encounter problems. We do offer professional installation, see: <http://www.magmodules.eu/installation>

# 1. Installation

**Disclaimer:** We recommend to install any module you purchase/download in a testing environment before deploying it to your production environment. Please also backup your Magento installation (files and database) before installing any module and make sure no conflicting extensions are installed. All our modules are tested in clean Magento installations without third party extensions and we can't guarantee for compatibility with third party extensions.

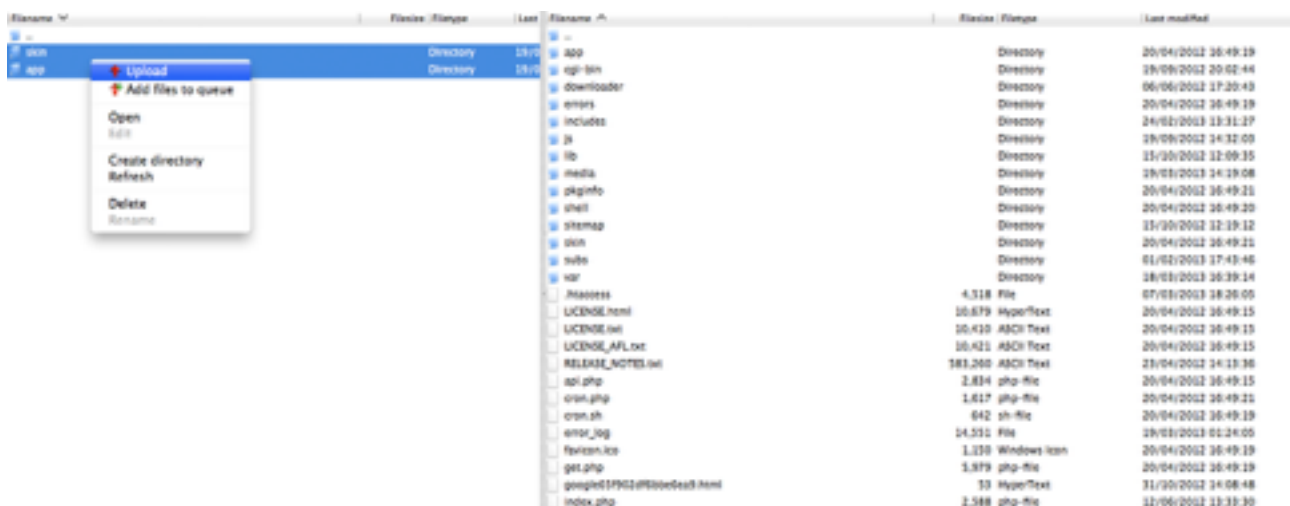

The installation is done in the following 5 easy steps:

## 1.1 - Disable compilation

If you have compilation enabled in your Magento store please disable it before installing the extension. You can check compilation state in System > Tools > Compilation, see "Compiler Status". If Compiler Status is set to enable, please disable it with the button on the top right. If you don't do so there's a good chance you'll temporarily break your Magento installation. After step 1.4 you can run the compilation process again if it was set to enabled.

## 1.2 - Upload module

Extract the extensions ZIP-file (using Winzip, WinRar, etc) and upload the app and skin folder to the root directory of the Magento installation. (You should not upload any other present folders within the supplied zip file, only these three directories)

All folders should match the existing folder structure. If one of our extensions is already installed and you're updating it, make sure to overwrite the existing files of the extension.

Warning for Mac OS users: If you are installing the extension in a local environment or you are using Transmit, make sure to use \*merge\* and not to \*replace\* the existing folders contents, as otherwise your app and skin folder will be gone.

### **1.3 - Flush cache storage**

Go to System > Configuration > Cache Management and click both the 'Flush Magento Cache' as well as the 'Flush Cache Storage' button. This is required to activate the extension.

### **1.4 - Re-login**

Log out of the Magento admin and log back in, otherwise you will see a 404 Error when trying to open the configuration section if you don't log out / log in once.

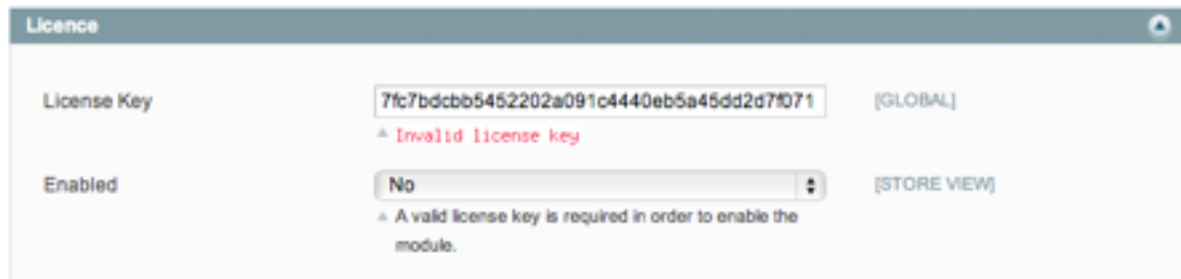

### **1.5 - Check module**

Navigate to System > Configuration > Magmodules > Anywhere gallery in the Magento admin. If you can see the configuration section of the module in the left menu, you're done!

## 2. Configuration

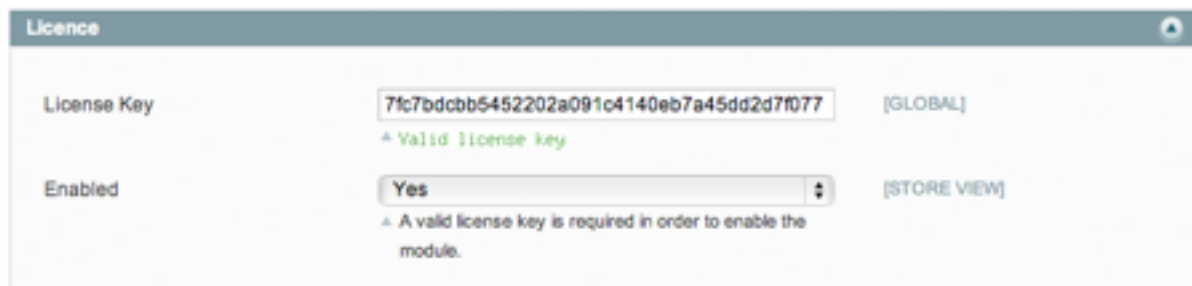

### 2.1 - Enable the module / License

After you have installed the extension you will be able to enable it by entering the supplied License key in System > Configure > Anywhere Gallery. Enter the supplied License Key and save config. If the correct License Key is entered the message will display "Valid license key", and the module can be enabled, see:

The screenshot shows a configuration window titled "Licence". It contains two main sections. The first section, "License Key", has a text input field containing the key "7fc7bdcbb5452202a091c4440eb5a45dd2d7f071". To the right of the input field is a label "[GLOBAL]". Below the input field, a red error message reads "Invalid license key". The second section, "Enabled", has a dropdown menu currently set to "No". To the right of the dropdown is a label "[STORE VIEW]". Below the dropdown, a green message reads "A valid license key is required in order to enable the module."

If an incorrect license key is supplied, or the license key does not match the url of the shop to which the license is supplied. the module will display "invalid license key", and the module will be disabled, see:

The screenshot shows the same "Licence" configuration window. In this state, the "License Key" input field contains the key "7fc7bdcbb5452202a091c4140eb7a45dd2d7f077". The label "[GLOBAL]" remains to the right. Below the input field, a green success message reads "Valid license key". The "Enabled" dropdown menu is now set to "Yes". The label "[STORE VIEW]" remains to the right. Below the dropdown, the same green message "A valid license key is required in order to enable the module." is displayed.

You can find your license key on your order conformation mail. If this e-mail is lost, or you would like us to supply you with a staging/development license key, please contact us. The license key is a Non-Exclusive Single Domain License (NESDL). The "NESDL" grants you permission to use the Software on a single website. A new "NESDL" is required if you wish to install the Software in a different domain or in other project. The license key is linked to the domain supplied at the purchase of the module and is valid for one installation with unlimited storefronts.

## 2.2 - Configure the Gallery Extension.

After you have activated the module, it's time to walk through the configuration. First we need to setup some data for the Gallery extension.

We can find these config files at: System > Configuration > Magmodules > Gallery

The screenshot displays the configuration interface for the Gallery extension, organized into three main sections:

- Default Values:** Contains five settings:
  - 1. Default Theme: Polaroid Theme (dropdown menu)
  - 2. Image Width: (text input field)
  - 3. Image Height: (text input field)
  - 4. Thumb Width: (text input field)
  - 5. Thumb Height: (text input field)
- Colorbox Lightwindow:** Contains two settings:
  - 6. Enabled: Yes (dropdown menu)
  - 7. Include jQuery: Yes (dropdown menu)
- Thumbnail Generation:** Contains three settings:
  - 8. Constrain Only: No (dropdown menu)  
▲ Image picture will not be bigger than set values.
  - 9. Keep Aspect Ratio: No (dropdown menu)  
▲ Image picture width/height will not be distorted.
  - 10. Keep Frame: No (dropdown menu)  
▲ Fill image with white background

All these settings are **default-settings**, you can easily edit every single gallery.

1. Choose the default theme to use in all galleries
2. Fill in the default image width
3. Fill in the default image height
4. Fill in the default thumb width
5. Fill in the default thumb height
6. Enable or disable the color box lightbox
7. Include or exclude jQuery
8. Choose if you want to constrain the thumbnail size
9. Choose if you want to keep the aspect ratio of the thumbnail (width/height)
10. Do you want to keep the frame if the thumb is bigger/smaller.

## 2.2.1 - Manage Galleries - General

Now you configured the galleries we can add one. Go to **CMS > Anywhere Gallery** to enter the gallery dashboard.

Here you can add a new gallery like below;

A screenshot of a web application interface for editing a gallery. On the left is a sidebar with a "Gallery Information" header and three sub-items: "General" (selected), "Media", and "Advanced". The main content area is titled "Edit Gallery 'Daft Punk'" and has a top bar with buttons: "Back", "Reset", "Delete Gallery", "Save Gallery", and "Save And Continue Edit". Below the title is a "General Information" section with several form fields, each preceded by a red circle containing a number: 1. "Gallery Title" with the value "Daft Punk"; 2. "Short Code" with the value "daft\_punk"; 3. "Status" with a dropdown menu showing "Enabled"; 4. "Gallery Description" with a text area containing "test"; 5. "Theme" with a dropdown menu showing "Default Theme"; 6. "Display Gallery Title" with a dropdown menu showing "Yes"; 7. "Popup link" with a dropdown menu showing "Colorbox popup".

1. Fill in your Gallery title
2. Create a Shortcode you want to use in your CMS pages
3. Enable or Disable the gallery
4. Type in your gallery description you want to use for this gallery
5. Choose your favorite theme
6. Select if you want to use the Display Gallery Title
7. Select the action of clicking on a image;  
None = nothing will happen  
Colorbox = a lightbox will open  
Imagelink = The image will opent by the browser

## 2.2.2 - Manage Galleries - Media

The media browser works exactly the same as the image browsers you know from products in the catalog.

Gallery Information

General

Media

Advanced

Edit Gallery 'Daft Punk'

Back

Reset

Delete Gallery

Save Gallery

Save And Continue Edit

Image	Title	Description	Tags	Sort Order	Disable	Remove
No Image						
	Image 1	Description 1	daftpunkfoto	1	<input type="checkbox"/>	<input type="checkbox"/>
	Image 2	Description 2	daftpunkfoto	2	<input type="checkbox"/>	<input type="checkbox"/>

Browse Files...

Upload Files

1. The image you uploaded
2. The title of the image
3. Description of the image
4. Tags
5. Sort order of the image
6. Select browse files to select the files you want to upload
7. Click on upload files to upload the selected images

### 2.2.3 - Manage Galleries - Advanced

If you want to use custom settings click on advanced, if you want to use the default settings you can leave all fields empty.

The screenshot shows a web interface for editing a gallery. On the left is a sidebar with 'Gallery Information' and tabs for 'General', 'Media', and 'Advanced'. The 'Advanced' tab is selected. The main area is titled 'Edit Gallery "Daft Punk"' and has buttons for 'Back', 'Reset', 'Delete Gallery', 'Save Gallery', and 'Save And Continue Edit'. Below the title is a section for 'Advanced Settings (leave empty for default)' with the following fields:

Setting	Value
Thumbnail width	120
Thumbnail height	120
Popup width	500
Popup height	500
Thumbnail creation:	
Constrain Only	-- Use default
Keep Aspect Ratio	-- Use default
Keep Frame	-- Use default

1. Choose the thumbnail width
2. Choose the thumbnail height
3. Select popup width
4. Select popup height
5. Choose if you want other settings than default, yes or no.
6. Choose if you want other settings than default, yes or no.
7. Choose if you want other settings than default, yes or no.

### 3. Add your Gallery to CMS page

Now your gallery is filled with image your ready to implement it on a page.

First you need to select the short code shown in the gallery dashboard, see the image below.

**Manage Galleries** Push thumbnail cache Add New Gallery

Page 1 of 1 pages | View 20 per page | Total 3 records found

Export to: CSV Export Reset Filter Search

Select All | Unselect All | Select Visible | Unselect Visible | 0 items selected

	ID	Title	Short code	Display code	Status	Updated At	Action
Any						From: To:	
<input type="checkbox"/>	3	Robert test	testrobert	<code>{{block type="gallery/show" id="testrobert"}}</code>	Enabled	17/09/2013	<a href="#">Edit</a>
<input type="checkbox"/>	2	Daft Punk	daft_punk	<code>{{block type="gallery/show" id="daft_punk"}}</code>	Enabled	07/11/2013	<a href="#">Edit</a>
<input type="checkbox"/>	1	Test Gallery	test_gallery	<code>{{block type="gallery/show" id="test_gallery"}}</code>	Enabled	30/11/00-1	<a href="#">Edit</a>

Now you can go to the CMS page you want and paste it like below on the position you want and it's ready to go!

You even can add the short code on a productpage the same way.

## 4. Support & Troubleshooting

### 4.1 Support

We offer six months free support and one year free module updates from date of purchase for all our modules. If you need support or have questions directly related to this module, please visit <http://www.magmodules.eu/> or drop us an email at [support@magmodules.eu](mailto:support@magmodules.eu)

### 4.2 Troubleshooting

How do I uninstall this module?

- Delete all extension files (see content zip-file) from the ftp and Flush your Magento Cache (Admin > System > Cache Management > Flush Magento Cache).
